

WEB DESIGN AND PROGRAMMING ACCOMPLISHMENT REPORT

Name: Emkie D. Legaspi

Section: II-IT4

Group Number/ Project Title: Group 8 / Mukbang hub

Our project is about food navigation; its purpose is to be sort of like a map, but for foods that are near the designated area (CCC view). This can help students choose what meal they want to eat at any time of the day since some stores are open 24/7. The web page includes a menu, price range, location, time/date, and recommendations. This feature can help students navigate the area and choose the best and most affordable food they can eat near them. But mainly, our purpose in this project is to help food vendors and stores increase their income because this web page can be used as an advertisement for their products. With the help of my other classmates, we completed a webpage that is not complete as of yet, but as time goes on, we will improve this project. I help my group by giving suggestions and ideas, but mostly I spend my time designing. Unfortunately, my current design is not present in our current state of the project since we lack a lot of time. But I will make sure that in the ongoing improvement, I will do my best and give a lot of effort to help and improve our website.
