WEB DESIGN AND PROGRAMMING
ACCOMPLISHMENT REPORT

Name: Harvie Tan   Section: 2-IT4

Group Number/ Project Title: Group 8/ FoodSpot

There's big changes in our web designs. We decided to changed the name of our website / project title because we know that this is the greater project title that suits for the concept and ideas of our website. A lot of adjustments and changes happened, especially the header section, which I upgraded the appearance and design of it with some effects. After that, I create the footer section in order to prevent some errors at the end part of the web programming. And instead of creating another html files for the menus and about sections, I also included them bottom of the homepage section. In the homepage section, there's button that I create for the menu, and when you clicked it, it scrolls down to the menu section. Behind of it, I put some JS codes for that little effect, in order to scroll it down. In the menu section, I tried to fix it but I can't debug it so that the alignment of the items are not pleasant to look at. I also put some CSS effects on it that when you hover it, there is box shadow. Right after that, I created the about section. I also put Log in and Sign up forms since it will be worked by using accounts. But for now, it is not possible to register some information to it because there's some works that needs to be done for it. And at the end of the semester, we will try to make it responsive.
