Our website includes important information such as menus, price ranges, locations, and working hours, as well as personalized recommendations. The main goal is to help students navigate the region and make informed judgments about economical and appealing dining options. Furthermore, by employing the website as an effective promotional platform for their products, we hope to contribute to the increasing income of food vendors and retailers. As a team, we redesign the website, making it more friendly to visitors. As of now, there is no interface with which the visitor can interact to find a place or check the price of the foods, and we are hoping to establish this in the finals.
