WEB DESIGN AND PROGRAMMING
ACCOMPLISHMENT REPORT

Name: _Neil Genrei C. Casao_____   Section: _2-IT4_____
Group Number/ Project Title: _Group 8_____

On the making of the project, the Accomplishment that I contributed to the group was creating the main layout design of the home website that most see, the layouts design of how the food categories should be arranged that will be used on the CCC Food Website. The activities that I have contributed are giving some ideas on the concept design of map location using some simple location coding or using the google map as the base for the location then marking it up the location of the vendor. I have also contributed to the coding for the recommendations of the food by adding a count number and commenting on the food on how many people pick the specific food making it appear on the recommendations if the count number is high. I have also contributed by giving an idea that the website can only be contacted through contact number or by facebook due to most of the users are students and are mostly facebook users making it easy to contact.
